7. K. Krickeberg, *Nguyễn Thị Thùy Dung* and *Châu Nhị Vân*: Y học cổ truyền và Y học thay thế trong Y tế Công cộng / Traditional and Alternative Medicine in Public Health.

8. Public Health - Its Structure (Dang dở).

Principles of the Series

These texts are meant in the first place for Lecturers in Public Health in Vietnamese Universities and for their advanced students of Medicine, Public Health or Pharmacy. They stress the fundamental *ideas*, not technical details. Their objective is to furnish to their readers the scientific foundations of Public Health on which to do teaching, practical work and research, and to animate them to reflect independently.

One of their main principles is *coherence*. The Series as a whole will be a coherent presentation of the core subjects of Public Health with a focus on Vietnam. Its volumes,

and the chapters inside each volume, are closely coordinated with each other by the choice of topics, concepts, terms, notations and style and by many cross-references.

Financial support came from the German foundation "Else Kröner-Fresenius-Stiftung" for the books 1V - 5, from the "Switzerland-Vietnam Association" for the book 6, and from the German Consulate General at Ho Chi Minh-City for the book 7.
